

MOHD ZEESHAN (1+ Year Exp.)

+918533855864 | Meerut, Uttar Pradesh | contactshan143@gmail.com | linkedin.com/in/mohd-zeeshan-b1806a287

SUMMARY

Cloud and DevOps-focused Computer Science graduate with hands-on experience in AWS infrastructure deployment, containerization, CI/CD automation, and cloud monitoring. Skilled in designing scalable and secure cloud environments using Docker, GitHub Actions, Linux, and networking concepts. Strong foundation in backend development using Python and Flask.

EDUCATION

Bachelor of Technology, Computer Science | Dr. APJ University | CGPA: 7.19

10+2th | Board of Higher Secondary Education, Uttar Pradesh | 62.03%

10th | Board of Secondary Education, Uttar Pradesh | 67.03%

EXPERIENCE

ServiceNow – AWS Cloud Trainee | Softcrayons Tech Pvt. Ltd. / 06/2024

- Implemented monitoring and logging for applications using AWS CloudWatch. Set up custom metrics, dashboards, and alarms to track performance and operational health. Integrated CloudWatch Logs with AWS Lambda for real-time log processing and analysis.
- Designed and deployed a secure Virtual Private Cloud (VPC) with public and private subnets, NAT gateways, and security groups. Implemented best practices for network security and isolation, configured VPC Flow Logs for traffic monitoring.
- Managed user access and permissions using AWS IAM. Created and assigned roles, policies, and groups to enforce the principle of least privilege. Conducted periodic security audits and reviews to ensure compliance with best practices.

TECHNICAL SKILLS

Cloud & DevOps: AWS (EC2, S3, IAM, VPC, CloudWatch, CloudFront), GCP (Familiar with concepts), Docker, Docker Compose, CI/CD using GitHub Actions, Cloud Monitoring, Infrastructure Deployment

Programming: Python, Flask, REST API

Systems & Tools: Linux (Ubuntu), Windows, Git & GitHub, WSL, Virtual Machines, Networking

Security: VPC Architecture, IAM Role & Policy Management, Security Groups, Computer Networking

Database: MySQL (Containerized Database Deployment & Application Integration)

PROJECTS

Two-Tier Flask Web Application Deployment using Docker – Built and deployed Flask and MySQL-based two-tier application. Containerized services using Docker and Docker Compose. Configured secure container networking and environment variables. Improved application scalability and portability.

CI/CD Pipeline Automation using GitHub Actions – Designed and implemented automated CI/CD pipeline using GitHub Actions. Automated build and deployment workflow for containerized applications. Integrated Docker image build and deployment automation. Reduced manual deployment errors through workflow automation.

Static Website Hosting on AWS – Hosted static website using S3 and CloudFront CDN. Implemented bucket security policies and optimized content delivery.
